Market Gardeners

SEED ANNUAL

KING OF THE STAKERS—A many-purpose variety, extra early and smooth, medium large—Fruits are large, smooth, globe-shaped, bright scarlet and unusually free from cracks. Highly resistant to fusarium wilt. Very productive. We recommend it as a staked or unstaked tomato for fields in sections where tomatoes are subject to sun scald. As early as Earliana. Has normal vine coverage. Also very satisfactory as a greenhouse tomato, one grower reporting a 25% heavier yield than four other varieties. 70 days.

Andrews-Burri Seed Co.

505 WALNUT STREET • KANSAS CITY 6, MISSOURI

To Our Friends and Customers

C. C. Andrews

W. F. Huebner

FOR MANY YEARS the bulk of our business has been with the market gardeners, supplying them with the best the market affords. We are constantly on the alert for new and better varieties. We have been fortunate in giving our trade many of the outstanding varieties of today and you can rest assured that we will constantly endeavor to give your needs our first consideration as to quality and service.

We specialize in quick service and pride ourselves in shipping your order the same day it is received. We have been doing this for years.

We pledge anew this service!

ASPARAGUS

MARTHA WASHINGTON

The best of several rust resistant strains, green color, with purple tips, large attractive spears.

BEANS

ASGROW STRINGLESS VALENTINE

52 Days

This strain is becoming very popular in all sections. The 6 inch pods are quite straight, dark green, oval, and stringless. A fine market variety.

BOUNTIFUL

48 Days

The best, heaviest yielding flat podded variety, with light green pods, 6½ to 7 inches long, stout, flat, somewhat curved and absolutely stringless in clusters, making this the easiest one to pick. Very early, vigorous, and produces heavily.

LOGAN

51 Days

Round or pencil podded, stringless, medium dark green and very fleshy. Pods 5½ to 6½ inches long. Resistant to powdery mildew and mosaic.

TOPCROP

49 Days

A new tender green type. A "best" of the new varieties. Pods are round, medium green, 5 to 5½ inches long, stringless, resistant to bean mosaic. Good shipper and marketer.

RANGER

55 Days

A Refugee green pod variety. Resistant to mosaic and mildew, pods 4½ to 5 inches long, round, straight, stringless, light green, very prolific.

FULL MEASURE

53 Days

The fine stringless medium green pods are straight, 6 inches long, very fleshy, round, crease back, have no neck, show depressions around the bean and are tender. Follows Bountiful by a few days and is a heavy cropper.

TENDERGREEN

52 Days

Highest quality all-purpose bean, matures early, with 6½ to 7 inch pods, quite slender, straight and perfectly round. They are green, absolutely stringless, meaty and tender. A variety to grow for all channels.

RIVAL

50 Days

A Tendergreen type, developed by the U. S. D. A., excellent for canning, market or freezing. Pods are 6½ inches long, slightly curved, round, medium dark green.

CONTENDER

50 Days

Another new introduction by U. S. D. A., especially developed for its tremendous yielding quality and resistance to mildew and mosaic. Pods are of the Stringless Black Valentine type, only straighter and longer. Pods are round, stringless, medium green. For home, market and shipping.

COMMODORE

55 Days

Bush type, with pods of Kentucky Wonder pole for size and flavor. Pods are 9 to 10 inches long, round, stringless, medium green.

BURPEES STRINGLESS GREEN POD

50 Days

Very early, productive, hardy and vigorous, with dark green pods, 5½ inches long; straight, stout, round and crease-backed. Excellent marketer and shipper.

WAX PODDED BEANS, DWARF

PENCIL POD WAX 55 Days

Very strong, vigorous, 15 inches high, and very productive. Pods are large, 6½ to 7 inches long, fully rounded, straight and deeply saddle-backed, golden yellow, stringless, brittle and fleshy.

UNRIVALLED WAX 53 Days

Immensely productive. Pods 5 to 5½ inches long, narrow, straight, stringless when young, and fleshy. Disease resistant. Excellent for shipping, making it ideal for market gardeners.

ROUND POD KIDNEY WAX 52 Days

Especially fine for home gardens and canning. Plants of medium size, prolific. Pods 5½ to 6 inches long, round, fleshy, brittle, stringless and of fine quality.

CHEROKEE WAX 52 Days

A wax podded variety for home, market and shipping. Tender and stringless. Oval, nearly straight, 6½ inches long.

POLE BEANS

WHITE CORNFIELD IMPROVED (Previously called Kansas Wonder)

A white seeded variety, very productive, pods medium green, 9 inches long and nearly round; flesh brittle, stringless when young. Can be used for snap beans, a good shipper. Superior to the Old Kentucky Wonder. If you are planting pole beans this year, don't fail to include Kansas Wonder.

KENTUCKY WONDER 65 Days

The most widely used pole variety. Medium green, pods 6½ to 8 inches long. Curved, slightly stringy, and of a distinct flavor. Good for home and market.

DWARF LIMA BEANS

FORDHOOK U. S. 242 75 Days

Uniform, heavy yielding, dependable. A new and better lima bean for market, developed by the U. S. D. A. This strain will set heavy crops of fine pods, even under adverse conditions such as hot, dry weather. It yields more on the early pickings and the total yield for the season is greater. The pods are remarkably uniform—every one is good size and closely filled with 3 or 4 choice thick beans. We highly recommend this strain to all growers, particularly to those who have had difficulty growing good limas in the past.

FORDHOOK BUSH 75 Days

Plants strong, erect, bearing pods in clusters of from 4 to 8. Pods measure 4 to 5½ inches long, and contain 3 to 5 large green beans.

HENDERSONS (BABY LIMA) 65 Days

Plant medium large, very productive. Small pod, 3 inches long, contains 3 to 4 green shell beans of very fine quality. Plant bears until frost.

POLE LIMA BEANS

KING OF THE GARDEN 88 to 92 Days

An improved strain of pole limas. Pods 6 to 7 inches long, dull medium green, with large flat white seeds.

CAULIFLOWER

WHITE MOUNTAIN

Because of its unusual qualities and resistance has displaced nearly all of the other varieties where in competition. A strong growing variety of the snowball type, produces larger and deeper heads and with no unusual growing hindrances will make very ample foliage with overlapping leaves over the head as a protection to the snow white heads in its forming. The heads are of great depth and pure white in color, green leaves rarely appear in the head. Fifteen years experience prompts us to say that White Mountain will produce 25 to 30 per cent more number one marketable heads than most other varieties. White Mountain is in a class by itself as our customers in Colorado, Michigan, Minnesota, Iowa and Illinois back this report up by their own proofs.

SUPER SNOWBALL

Our Super Snowball is the best strain grown. Produces a wonderful yield of large, compact, beautiful white heads, well protected with leaves which curl over the head. In a way quite distinct from other strains, heading very uniform, so crops can be harvested within two or three weeks.

"SNOWBALL 16" (White Excelsior)

A somewhat more vigorous type of the Snowball class and selected to produce a larger head than Snowball without losing materially in earliness. After we introduced this new type it has conquered the market by leaps and bounds and we feel perfectly sure it will meet with instantaneous favor in your locality. This new strain will mature with great evenness, the bulk of the crop may be harvested 120 days after sowing.

BEETS

DETROIT DARK RED

55 Days

An outstanding market variety with large attractive tops and smooth, globular roots. Excellent for freezing and small whole beets.

GREEN TOP BUNCHING

54 Days

An excellent green top that does not turn red or brown in cool weather. Roots round and blood-red.

CROSBY EGYPTIAN

50 Days

Extra early for market gardeners and home gardens. Tops medium.

GREEN TOP EARLY WONDER

55 Days

An outstanding new selection of Early Wonder Tops slightly taller than original strain. Foliage clean bright green which does not have the tendency to turn red or bronze when grown in cool weather. Roots nearly globe shaped, slightly flattened on top and bottom. Interior color deep purplish red, toned with lighter shade. Recommended for shippers.

DETROIT SHORT TOP

58 Days

Excellent shipping variety, due to short tops. Small roots of deep red color, and smooth globe shape. Performs well on muck soil.

BOSTON CROSBY (MATCHLESS) (A & B Special)

55 Days

A fine globe shape for early bunching, as well as for main crop. There is no beet that is its equal in quality and fine appearance. It is superior in shape and color with the extra advantage that the leaves are a lighter green, the bulbs have small tap-roots and smooth and much darker in color than most globe beets, both in and out. The flesh is rich, deep brilliant scarlet red without light zones, always sweet and tender. Boston Crosby is an all-purpose beet, but especially fine to growers catering to the trade who demand quality and appearance.

ASGROW WONDER

51 Days

Extra early, deep red roots, semi-flat with rounded bottoms; tops green, erect, uniform in size, making a perfect bunching beet.

CABBAGE

EARLY VARIETIES

GOLDEN ACRE

65 Days

Earliest of all round-headed varieties, most widely used by market growers and for early shipping. Weight about 3 pounds.

ELITE GOLDEN ACRE

60 to 63 Days

Improved Golden Acre about 5 days earlier than regular Golden Acre. Round as a ball, with short stem, medium green leaves. 3 to 3½ pounds.

COPENHAGEN MARKET

65 to 70 Days

One of the best early round-headed cabbages in cultivation. Medium light green leaves, fine grained and weighing 3 to 3½ pounds. An excellent garden and shipping variety.

GREEN ACRE

66 Days

Similar to Golden Acre, only greener and a little larger and a few days later. The uniform, compact plants are short-stemmed and have few outer leaves. The intense green leaf color makes the head appear fresh and inviting, even after shipping. 3 to 4 pounds.

EARLY JERSEY WAKEFIELD

60 to 62 Days

The earliest pointed head cabbage, of excellent flavor and appearance, weight 2 to 2½ pounds. Very few outer leaves, with greenish white interior, fairly solid.

GLORY OF ENKHUIZEN

78 to 82 Days

Large, round, solid heads, with gray green outer leaves, weighing 5 to 6 pounds. The best medium early cabbage, excellent for shipping and home gardens.

MIDSEASON AND LATE VARIETIES

DANISH BALLHEAD

105 to 110 Days

Short stemmed, medium large with green-blue color, round, solid heads average 6 to 7 pounds. Tender, crisp and of good flavor. Excellent keeper and makes fine quality kraut.

PENN STATE BALLHEAD

100 to 110 Days

Improved strain of ballhead, deep flattened globe in shape, solid with creamy-white interior. Weigh 5 to 6 pounds and short stemmed. Good shipper and storage cabbage.

OAKVIEW BALLHEAD (HIGHLAND BALLHEAD)

A truly wonderful cabbage of the later varieties, somewhat similar to Ferry's Hollander in growth and season, but more uniform in size and darker green than Ferry's—not unusual for bushels to show a weight of 65 to 70 pounds. Much superior in quality to any other late variety than we are acquainted with and our customers give us the information quoted.

SAVOY CHIEFTAIN

88 Days

Medium large drumhead type, rounded on top, flat at base. Eight inches in diameter, weight 5 pounds. Dark olive green color, firm, and stands a long time without bursting.

SPECIAL RED ROCK

98 to 103 Days

A super strain of red cabbage, short stemmed, solid, globular heads, weighing 7 to 8 pounds; deep red.

RED ACRE

65 to 70 Days

The earliest red cabbage, uniform in shape and color, deep red for early market and home gardens.

RED METEOR

80 Days

Medium early red cabbage for general use, solid dark red heads, 6 inches in diameter, weighing 4 pounds. A dependable header of uniform size and shape.

YELLOWS RESISTANT VARIETIES

EARLY YELLOWS RESISTANT GOLDEN ACRE

63 Days

Absolutely a new variety which has been bred out of the Golden Acre but has been entirely satisfactory in the last ten years in many parts of the country. We have found it to be as early as the early strains of Copenhagen and yet as resistant as any of the other varieties of cabbage which are bred with a thought of producing a crop on infested soils. 3 to 3½-pound head.

EARLIEST OF ALL

Is an early yellow resistant Golden Acre, more resistant than Early Detroit and Racine Market, stands longer without bursting, darker green, about 3 to 4 days earlier than Detroit resistant and about 6 to 7 days earlier than Racine Market. A more superior strain of the other yellow resistant strains of Golden Acre.

GLOBE

80 Days

A yellow resistant type of the well-known Glory of Enkhuizen, having about the same size head as the Glory. The most popular of all the yellows resistant varieties. We sell more of Globe than all others.

YELLOWS RESISTANT BUGNER'S SHORT STEM

110 Days

Extremely popular wherever planted, our strain of seed is a production of the originator's stock seed. This variety produces large, semi-round heads. It is disease resistant and will take a trifle more space to grow than other varieties. Should not be set closer than 2½ by 3 feet.

DANISH BALLHEAD SHORT STEM

(Yellows resistant.) A desirable new strain which produces excellent crops on soil infested with cabbage "yellows." Keeps well, is of fine texture, and matures slightly earlier than Wisconsin No. 8.

MARION MARKET

75 to 78 Days

A Yellows resistant Copenhagen Market. Only a few days later than Copenhagen Market. A heavy yielding mid-season cabbage. Round, compact heads, weighing 5 to 6 pounds.

WISCONSIN BALLHEAD IMPROVED

(Evergreen Hollander)

95 to 100 Days

Similar to Danish Ballhead. Latest introduction in the disease resistant cabbages. A fine strain of Hollander, heads well rounded, solid, and dark green color. More resistant to yellows than any other late varieties of cabbages. About 7-pound heads.

WISCONSIN HOLLANDER NO. 8

108 to 112 Days

A yellows resistant strain of the Danish Ballhead, desirable for growing in sections infested with disease. Plants are somewhat larger, more leafy and spreading than the Ballhead, but heads are fully as firm, compact and long keeping. Heads 7 pounds.

RED HOLLANDER, YELLOWS RESISTANT

Absolutely a yellows resistant red cabbage, somewhat smaller than Mammoth Red Rock, color dark red. Its firm heads make it a good keeper. In size and season about the same as Danish Ballhead.

CARROTS

SUPREME HALF LONG

68 Days

Resembles a small refined Danvers with short top. Roots 6 to 7 inches long, about 2 inches in diameter at shoulder, tapering to a half stump. Exterior smooth and of excellent color. Flesh tender, sweet and of fine flavor. Core small and the same red as the rest of the flesh. Especially adapted to use by market gardeners both for bunching and as a basket carrot.

MORSE BUNCHING

77 Days

All-American Award 1934. Tops short; foliage rather coarsely cut; stems medium size and strong. Roots at maturity are 1¼ to 1½ by 8 inches in size, almost cylindrical, with round shoulders, and are well stumped. Developed as a bunching carrot for long distance shipping. Does well in north and should be used more by market growers.

NANTES

70 Days

Stump Rooted. Particularly desirable for frame culture and one of the best for home garden and early market. Tops small. Roots bright orange; 6-7 inches long, 1¼ inches thick, cylindrical; stump rooted. Flesh bright orange, of highest quality; core inconspicuous. Similar to much that is offered under the name "coreless."

IMPERATOR

77 Days

All-American Selections Silver Medal, 1933. Similar in size and shape to Morse's Bunching, with medium tops strong enough for bunching, shoulder slightly rounded. Bright orange color and coreless.

TOUCHON (XXX CORELESS)

70 Days

Touchon (XXX Coreless). This variety is by far the earliest of its type but its earliness does not affect in any way its size or quality. It is a half long, cylindrical, blunt-pointed variety, with a very small tap-root and small, fine top. The shape and size are extremely uniform, averaging 6 to 7 inches in length and 1½ inches in diameter; clean skinned, smooth and easily pulled. The flesh is very fine grained, absolutely without any woody heart or core, and entirely free from stringiness or coarseness. Color of flesh is rich red-orange, and of finest flavor.

CHANTENAY SPECIAL

55 to 70 Days

Long Type. This variety introduced by the great French firm of Vilmorin-Andrieux & Co. forty years ago, is still the leading commercial carrot in the United States. It has held its great popularity on merit alone, for it has a beautiful appearance and excellent table quality. Its length will average from 6 to 7 inches and its color is rich orange red. In shape the root is of great uniformity, of the half-long type, smooth and free from side rootlets. Our stock has been finely bred and may be planted with absolute confidence by market gardeners, truckers and ranchmen. If you have not tried our Chantenay, do not fail to do so.

DANVER HALF LONG

75 Days

A handsome cylindrical shaped carrot of good size and stump-rooted. It differs from Chantenay in that it is slightly longer in reaching maturity and will average an inch or so more in length. Our true type averages 6½ to 7 inches in length, tapering uniformly to a blunt point. The roots are smooth and very attractive, of rich, deep orange color, with crisp, sweet, tender flesh. A popular variety for the shipper.

IMPERATOR, LONG TYPE

77 Days

An improved Emperor with longer and more slender roots, 9 to 11 inches long and 1½ inches wide at the shoulder. Becoming more popular as a shipping variety, with good color, easy bunching, and attractive appearance, it is a long type leader.

CHINESE CABBAGE

CHIH LI

70 to 75 Days

Imported. This is the most popular kind and best for market and roadside stands. The heads are very attractive, often 18 inches long, uniform in shape and size, hard and firm. A profitable crop both muck and upland, as it commands a ready market, and can also be held in storage for winter sales. Sow the seed in July or August.

MICHI LI

70 Days

Similar to Chihli, but surer heading, darker green, 18 to 20 inches tall, crisp and tender.

COLLARDS

TRUE GEORGIA

60 to 80 Days

This is a tall, loose-leaved cabbage-like or kale-like plant, grown throughout the South and known in different sections as "Cole," "Colewort" or simply "Greens." It is extensively used for the table as well as for stock feeding in the South, where it continues in growth and is usable throughout the entire winter. Collards usually succeed in locations where cabbage cannot be grown to perfection. Sow the seed thickly in drills, in rich ground, transplanting when about 4 inches tall. Sow in drills where the plants are to remain, and when well started thin to two or three feet apart in row. In the South seed may be sown from January to May and from August to October.

CHICORY (French Endive)

WITLOOF

140 to 160 Days

A delicious winter salad, eaten usually with French dressing like Cos lettuce. The root is long like a parsnip, but the part eaten is the top of the root, with the young leaves, usually best when forced in the winter.

DILL

MAMMOTH LONG ISLAND

70 Days

The most popular variety. Annual plant, 2 to 2½ feet tall.

CANTALOUPE OR MUSKMELON

HEARTS OF GOLD (Morrill's Large Strain)

93 Days

Round type. The outstanding feature of this melon is its deep golden flesh. Fine grained, sweet, juicy and distinctly flavored. A mid-season variety, popular with gardeners and shippers.

MILDEW RESISTANT NO. 45

85 to 90 Days

A Rocky Ford variety adapted to mildew sections, but also excellent as a shipper in all sections. The No. 45 has thick salmon colored flesh. Sweet, very small seed cavity, medium size, heavy netting with faint rib. The shipping qualities are unequaled, as this melon can be shipped long distances when fully ripe, arriving in perfect condition.

HALES BEST (JUMBO STRAIN)

86 Days

A large fruited strain of this leading variety for local markets. Fruits oval, 5-6 pounds, ribbing somewhat prominent, heavily netted. Flesh thick, salmon-orange, sweet and of excellent quality; seed pocket rather large.

HONEY ROCK (SUGAR ROCK)

87 Days

Fruit nearly round, medium, weighs 4 pounds. Skin grey-green covered with a coarse netting. Flesh thick, juicy, orange-salmon with fine flavor.

PRIDE OF WISCONSIN (Breakfast Queen)

90 Days

Similar to Honey Rock, except slightly larger and more uniform; pearly gray skin, shallow ribbed with sparse heavy netting. Flesh deep orange, very sweet and excellent flavor. Extra good market melon.

DELICIOUS

83 to 86 Days

An excellent early variety of superior quality. Similar to Benders Surprise, but 8 to 10 days earlier. Of fine appearance and heavy yielder. Sweet, deep orange flesh.

IROQUOIS

88 Days

Developed with definite resistance to Fusarium wilt, by Cornell University. This medium sized melon has such uniformly fine flavor and thick flesh that it has quickly become a great favorite. The flesh is very thick, smooth, fine-grained and sweet. The color is an excellent deep orange. Ripens at about the same time as Benders. Vigorous vines hold up well until frost.

HALE'S BEST NO. 36

82 to 86 Days

The best and earliest melon of the Rocky Ford type. Skin yellow-green, very little ribbing, heavily netted. Flesh salmon-orange, sweet and spicy. One of the best for shipping and market.

SCHOON'S HARDSHELL (Hardshell Golden Osage)

90 to 95 Days

A new and excellent flavored large melon. Slightly oblong with coarse netting on a tough, hard shell and distinctly ribbed. Bright salmon colored flesh and best flavor. Ideal shipper. Weighs 5 to 8 pounds.

ORANGE FLESH

85 to 90 Days

Rocky Ford type of shipping melon. Fruits 8-5½x6-6½ inches, weighing 2½ to 3 pounds; thick oval to globular; no ribbing but finely laced netting: Skin dark green. Flesh salmon-orange, medium thick, highly flavored, firm and top quality.

CELERY

TALL GOLDEN SELF-BLANCHING

Tall, compact, medium diameter bunch, blanches readily to creamy white. Stalks long, good quality.

GOLDEN PLUME OR WONDERFUL CELERY 112 to 117 Days

This celery is similar to the Golden Self-blanching. Medium tall, thick set, compact bunch. Easily blanched; stalks fairly long, crisp, solid and of finest flavor; heavy yielder. Excellent late crop and market celery. Keeps well in storage.

MICHIGAN GOLDEN—NEW STRAIN

Developed by Michigan State Agricultural College. Resistant to fusarian wilt. Bred from tall strain Golden Self-blanching. Sealed packages only.

UTAH 15 (Previously called Jumbo 99)

Of Utah parentage, earlier, taller and vigorous growth; height 22 to 26 inches. Large, erect, compact, full heart. Light green at maturity. Can be easily blanched to a clear greenish white.

CORNELL NO. 19

The stalks are 10 to 11 inches at the joint, smooth ribbed and well rounded. The hearts are long and well developed. The flesh is thick, tender and crisp, free from strings. We suggest it for main crop, as it has a tendency to produce seeds.

GIANT PASCAL

Grows two feet high. The stalks are very broad, thick and crisp, and of a rich nutty flavor. The heart is golden yellow, very full and attractive in appearance. It blanches very easily and quickly.

CELARIC

TURNIP ROOTED CELERY

Sow seed same as celery. Transplant in rows two feet apart, six inches in the row. Thorough cultivation is necessary to secure good roots. Earthing up is not necessary. Roots may be cooked or used as salad.

HYBRID SWEET CORN

SENECA GOLDEN 72 Days

Stalks 5½ feet tall and produce two marketable ears on practically every stalk. Ears nearly as large as Golden Cross and well filled clear to the tip. Kernels clear golden yellow, and if harvested when ready are of excellent quality.

SENECA DAWN 65 Days

A large eared, extra early yellow hybrid. Stalks 4½ to 5 feet, strong, upright. Ears well up from the ground, 6½ inches long. 12 to 14 rows, medium yellow, fair quality, kernels on large cob.

SENECA "60" 62 Days

This new hybrid is very prolific, usually producing two and many times three ears per stalk. The stalk is 4 to 4½ feet tall. Ears 6 inches long, slender, 8 to 10 rowed. Kernels yellow, medium wide and fair quality. The earliest of all hybrids. Not resistant to wilt.

SENECA 60XC13

65 Days

A new wilt resistant hybrid for those sections where bacterial wilt is prevalent. The 4½ to 5 foot stalk is a vigorous grower. Ears 6½ inches long, 10 to 14 rows of yellow kernels of fair quality. A larger ear than Seneca 60 and only a few days later.

GOLDEN CROSS BANTAM

84 Days

Four to 8 days later than Golden Bantam. Stalks averaging 6½ to 7 feet tall, are sturdy and straight, and under favorable conditions two ears are usually produced on each stalk. The ears are about 8 inches long, 10 to 14 rows, with tightly wrapped husk. This hybrid is also noted for its resistance to Stewarts disease and for the uniformity of its ears.

EARLIGOLD

72 to 75 Days

Developed for critical market gardeners who want earliness, ear size, wilt tolerance and improved quality in a first early hybrid. Earligold matures in 72 to 75 days. Ears slightly tapering, well filled, 12 to 16 rows, 6½ to 7 inches long. Plants are 5 to 5½ feet tall with few suckers.

TENDERGOLD

78 to 80 Days

A top cross of Purdue Bantam or Golden Sunshine. Ears are cylindrical to slightly tapering, 7 to 8 inches long, 10 to 14 rows of medium yellow kernels of good flavor and quality. 6½ to 7 foot stalks with few suckers, and large percentage of two eared stalks.

IOANA

87 Days

Originated by Iowa State College for a larger eared main crop. Ears 8 to 8½ inches, 12 to 14 rowed, well filled with medium narrow, light yellow kernels. Good quality and flavor.

CARMELCROSS

79 Days

A second early variety developed by the Connecticut Experiment Station for market, canning or home garden use. Vigorous and heavy yielding in comparison to its earliness. Medium sized tapering ears, 12 to 14 rows of straight, well filled rows.

MARCCROSS C6.13

75 Days

Early yellow wilt resistant corn. The 7 to 8 inch ears are borne on heavy, leafy stalks, 5 to 6 feet tall. Ears are slightly tapering, 10 to 12 rows, well filled tips, and are well above the ground. This variety, like all hybrids, is a heavy producer and uniform in maturing.

IOCHIEF

89 Days

The newest, best hybrid developed by the Iowa State College. IOCHIEF is tops on basis of yield and cutting. Stands well under drought conditions. Good flavor and tenderness. Stalk 7 to 7½ feet, ears set well up on stalk, for easy harvesting. Ears 8½ to 9 inches long, cylindrical, filled to tips, 16 to 20 rows of deep, narrow kernels. Good uniform color and of unusually high gloss carrying well down sides of kernels. Good husk coverage. Holds prime quality well in field.

NARROW GRAIN EVERGREEN

90 Days

White. A hybrid variety developed to provide growers with a late white type of heavy yield and high quality in shape and texture of kernels. Stalks tall and strong; ears large and well filled with 18 to 20 rows of narrow, deep kernels. A very promising variety.

CUCUMBERS

LONGFELLOW (OUR WONDERFUL)

72 Days

This wonderful strain of Longfellow is beautiful in appearance, of bluish green color, suitable for both the garden and forcing; 12 inches long by 2½ inches in diameter. Fruits straight with well-filled ends, making this an ideal for market.

A & C OR COLORADO (WONDERGREEN)

A beautiful, long, slender, dark green cucumber commanding a premium on the critical market; exceedingly popular because of excellent shape and intense dark color, which is maintained longer than in any other variety. Fruit tapering at stem, productive and resistant to unfavorable growing conditions. Seeds are few.

CUBIT

62 Days

This variety is of the A. & C. and Colorado class. Vines prolific. Fruits smooth, dark green color, cylindrical, with blunt ends. 8½ inches long with small seed cavity. Excellent shipper.

STRAIGHT-8

66 Days

This outstanding variety produces symmetrical, cylindrical fruits about 8 inches in length and about 1½ inches in diameter. Fruits well rounded at ends, deep green when ready for use, and free from stripping. An ideal shipping cucumber.

MARKETER

65 Days

A high yielding variety, somewhat on the order of Straight-8. Holds its dark green color exceptionally well. Outstanding in yielding ability, as prolific vines throw an exceptionally large number of female blossoms per plant. Stands heat better than most varieties.

STAYS GREEN, LONG TYPE

59 to 62 Days

This longer variety of Stays Green is similar to Stays Green, only longer and thinner, fruits 2-2½ by 8-9 inches, and little light color at tip.

ENDIVE

FULL HEART BATAVIAN

The commercial escarole. Plant medium large, with very deep, full, compact, well-blanchd heart. A more vigorous, earlier and more uniform strain than old Broad Leaved Batavian.

LARGE GREEN CURLED (PINK RIBBED)

95 Days

A late, coarse toothed variety of good size. Midribs of the outer leaves are tinged with rose. The dense mass of deeply divided leaves formed in the center blanches very readily to a rich cream color.

GREEN CURLED RUFFEC

96 to 100 Days

Standard variety for fall and winter. Finely divided leaves make the plant appear mossy. Medium large in size and blanches well at the heart.

PRESIDENT

Imported giant green curled variety. A remarkable new Curled Endive and the largest of all varieties, measuring 22-24 inches across. It is one of the hardiest kinds and withstands fall rains and early freezings. This Endive has a dense and full heart, easily and quickly blanching and is very fine curled. For truckers one of the best varieties.

EGGPLANT

FORT MEYERS MARKET

85 Days

The plants are of the high bush type, holding fruits well off the ground. This variety is widely grown in warm season areas and for shipping from the South. Fruits 9 to 10 inches long, 5½ to 6½ inches in diameter, broadest near blossom end. Outstanding for its smooth, purple-black color and high gloss.

FLORIDA HIGH BUSH

85 to 90 Days

This is a heavy yielding stock. Plants upstanding, holding fruit off the ground. Fruits elongated, tapering towards stem, dark purple color. This variety resists drought, blight and wet weather better than most varieties.

NEW HAMPSHIRE HYBRID

68 to 72 Days

Adapted by the New Hampshire Experiment Station for a crop in short season areas. Earliest strain, fruits blocky, egg-shape, smooth and glossy.

BLACK BEAUTY

80 to 85 Days

The best of all large fruited egg plants. Medium sized plants. Fruits are globe to oval shape, thick, with lustrous purple-black coloring and satin smooth gloss. Excellent for market, retaining perfect color long after picking.

LONG DARK PURPLE

The long fruited variety, fruits 8 to 10 inches long, 2½ to 3 inches thick; dark purple, smooth and attractive oblong oval in shape.

NEW YORK IMPROVED

Entirely spineless, black purple, glossy fruits are longer and larger than Black Beauty. Plants are spreading and low branching.

KALE OR BORECOLE

BLUE SCOTCH (DWARF)

55 to 60 Days

12 to 15 inches tall, upright, leaves large and finely curled. Plants of dwarf habit and the much desired bluish green color.

DWARF GREEN CURLED SCOTCH

55 to 60 Days

12 to 14 inches tall, leaves large, bright green, finely curled. The plant has a spreading habit, growing close to the ground and very hardy.

TALL SCOTCH

60 Days

24 to 30 inches tall, leaves large, curled and dark green. Very tender after frost. Tall stemmed Scotch type.

DWARF SIBERIAN

65 Days

12 to 15 inches tall. Sprawling growth, large blue-green leaves, not as curled as the Scotch varieties, rather coarse with frilled edges.

BLOOMSDALE, DOUBLE EXTRA CURLED

50 Days

9 inches high, very curled, dark blue-green, hardy, short stemmed, spreading and far denser in foliage than any other sort.

KOHLRABI

PRAGUE FORCING

52 Days

EXTRA FOR FORCING. Extremely early, with small tops, bulbs are of medium size, light green, or nearly white, and of best quality for table if used when about 2 inches in diameter.

WHITE VIENNA

55 Days

Very early, having few leaves, mild flavored, smooth white bulbs of medium size and fine quality. A fine forcing variety and can be planted closely.

PURPLE VIENNA

62 Days

Spreading plant with short green leaves with purple stems and veins. Bulb 2 inches in diameter, flattened globe shape, skin reddish purple, flesh white.

LEEK

ELEPHANT

The stalks are large and very sturdy. The bottoms are clear pearly white and smooth with the white part extending well up the stalk.

GIANT CARENTAN

150 Days

Large stems, 6 to 8 inches long, 2 to 3 inches thick, leaves very dark green. Hardy, prolific. For fall and early winter use.

LETTUCE

GRAND RAPIDS, WASHINGTON STRAIN

42 Days

This is one of the favorite forcing strains, being used by all the large greenhouse growers, who recommend it a superior lettuce. Color is light green, leaf crisp, tender and curly. Quality of the best. There are few, if any, sprouts.

GRAND RAPIDS

42 Days

Very early, hardy, disease resistant. Plants upright, compact and large. Bright solid light green. Leaves large, broad, margin much waved and frilled. Very tender and sweet when grown under glass.

GRAND RAPIDS U. S. NO. 1

Mildew resistant. Similar to Grand Rapids, except that the leaf margins are more deeply cut and heavily frilled. The color a little duller and lighter green. Recommended for general planting as it stands longer than other strains without molting.

GRAND RAPIDS TIP BURN RESISTANT

42 Days

Said to be tip burn resistant when grown under glass. Leaf and plant type similar to other Grand Rapids, except leaves not so frilled but more savoyed.

EARLY CURLED SIMPSON (WHITE SEEDED SIMPSON)

45 Days

Very hardy and dependable. Plants large, compact, bright lustrous green. Leaves broad, frilled, firm, crisp, sweet and of good quality.

BLACK SEED SIMPSON

45 Days

Dependable in all parts of America, and widely grown for home and market gardens. Plant large, attractive, compact, with broad frilled light green leaves and of fine texture and splendid quality.

GREAT LAKES

82 Days

Tip burn resistant. New iceberg type for summer growing. This variety is remarkable for its ability to stand up and produce good, hard heads even in hot weather of midsummer. The plants are large and vigorous, and the heads are of good size and attractive green color. They have heavy ribs and thick crisp leaves that fold well over to make very solid hard heads. Planted in the spring, they are ready to cut about a week later than Imperial 44 and will remain in condition for a long time thereafter for shipping. Great Lakes is best adapted for upland growing.

PREMIER GREAT LAKES

74 Days

A new development by the Pennsylvania State College. About a week earlier than Great Lakes. Uniformly large, dark green, slightly ribbed solid head. An early smooth leaf type of Great Lakes.

PENNLAKE

82 Days

Another development by Penn State College. Medium to small head, dark green outer leaves, slightly crumpled, well folded, crisp and very solid.

PROGRESS

80 Days

Medium size, compact and early. Crisp, dark green, thick leaved and heavily savoyed; resistant to tip burn. In season with Imperial 44.

DARK GREEN COS

70 Days

A medium large dark green variety which forms a good-sized, well folded head.

MUSTARD

FLORIDA BROADLEAF

40 Days

Large leaf, broad oval with white green midrib, spreading to upright, vigorous, slow to bolt. Bright yellowish green, 10 inches tall.

SOUTHERN GIANT CURLED LONG STANDING

40 Days

Will stand without bolting to seed for a long time; 10 inches tall, semi-erect to spreading; medium large and hardy. The leaves are a medium dark green with beautiful, finely curled edges.

FORDHOOK FANCY

50 Days

A fine variety with dark green feathery leaves, mild flavor. Makes good quality greens. Plants 15 to 18 inches in diameter, erect, compact and very slow bolting.

FORDHOOK FANCY (LONG STANDING)

60 to 70 Days

Leaves are slightly smaller and more finely cut and curled than the Southern Curled. A very pure stock.

ONIONS

UTAH WHITE SWEET SPANISH

110 Days

A selection from White Spanish, larger than the old strain. About the same size and shape as the Utah Yellow Spanish. This outstanding, large mild variety under favorable conditions often produces bulbs 4 to 4½ inches in diameter, and will produce a heavy yield of perfect-shaped

white bulbs, either in upland or muck soil. Large globe shape with small neck. Clear white skin, flesh white, fine grained. Very mild and sweet.

UTAH YELLOW SWEET SPANISH

112 Days

This excellent strain of Utah Sweet Spanish has made a lot of money for our customers in the last five years. It is a development of the well-known Spanish variety, Gigantic Gibraltar, and is very similar to Valencia and Denia. The bulb is large, deep globe shape, small neck, yellow skin, white flesh, fine grained, mild flavor. Fair keeping quality.

EXTRA EARLY YELLOW GLOBE

98 Days

Excellent semi-globed shaped and is a good yielder. It ripens well and under normal conditions the bulbs are ready for market 10 days ahead of the Southport Yellow Globe. The color is rich deep yellow, skin tough, flesh firm and white. Good keeper.

SOUTHPORT YELLOW GLOBE

110 Days

(Selected Strain.) This onion produces very heavy yields in good soil. The onions are of perfect globe shape and good, deep yellow color. This is the best shaped and best keeper of the Yellow Globe onions. We have an extra selected strain of this variety which produces onions of uniform globe shape and deep yellow color and with very small necks.

WHITE GLOBE OR SOUTHPORT WHITE GLOBE

110 Days

This is considered the best of the white varieties. It produces medium to large, handsome, fine globe shaped bulbs. The flesh is fine grained, snowy white and of mild flavor. It keeps very well for a white kind. The bulbs of the white varieties should be gathered as soon as ripe and carefully dried under shelter away from strong sunlight.

WHITE PORTUGAL OR SILVERSKIN

100 Days

This is medium sized onion of mild flavor and with beautiful clear white skin. The variety is a favorite with many for use when young as a salad or bunching onion and for pickling. It matures about 10 days earlier than White Globe and is fine for growing sets.

WHITE LISBON (White Bunch)

Once again we are pleased to offer this popular white bunching onion. This variety is planted very widely for table use or green onions, produces long slender onions, nearly pure white, mild and tender. One of the best for bunching, it is slow to bulb, has a heavy top that stands up well during the summer months.

EVERGREEN WHITE BUNCHING (New Wonder Bunch)

Sown in the spring, this variety produces large green onions early in the summer. It does not form a bulb. The stems are nearly twice as large as ordinary onions and hold in eating condition for a long time. If sown in the fall and given a little protection, this onion will stand all winter and produce fine, large "green" onions in the spring.

SOUTHPORT YELLOW GLOBE, BRIGHAM STRAIN

Preferred by many gardeners for its large yields and keeping qualities. True globe shape, solid; flesh is creamy white, firm and mildly strong; skin is deep yellow, thick and smooth. Grown successfully on muck or heavy soils.

OKRA OR GUMBO

CLEMSON SPINELESS

50 to 55 Days

A very uniform spineless variety, pods rich green, angular and ridged.

PERKINS MAMMOTH PODDED

62 to 67 Days

Plants 3½ to 4 feet tall, with heavy foliage. Pods 7 to 8 inches long by 1½ inches. Bright deep green, straight, slender, excellent quality, ribbed and spined.

DWARF GREEN

50 to 55 Days

The plants are branched, erect, 2½ to 3 feet tall, with dark green slender pods 7-8 inches long, and of good quality.

RHUBARB OR PIE PLANT

GIANT VICTORIA

Rhubarb is the earliest spring vegetable, and is grown for its leaf stalk. Victoria strain is the standard variety with long, straight stalks, and good color.

SALSIFY OR OYSTER PLANT

MAMMOTH SANDWICH ISLAND

This variety is less likely to branch than most varieties, producing uniform long, tapered white roots. For market and shipping.

SORREL

NARROW LEAF

A superior strain which we have been supplying the market growers for many years. Leaves are narrow and upright.

PEAS

THOMAS LAXTON

62 Days

A variety having been originated in England by Mr. Thomas Laxton of Bedford, a noted English horticulturist. This pea is hardy and slightly earlier than Gradus and a more abundant yielder. The pods resemble Gradus in shape, except that they are blunt-ended. Pods are 4 inches long, dark green, straight, plump and containing 6 to 8 large tender peas. Vines 30 inches tall.

WORLD'S RECORD

55 Days

Seed wrinkled, large, cream and green color. Pods are pointed about 4 inches long and broad. An early type of celebrated Gradus. Height of vine 24 to 30 inches, light green. Fine showy single pods, with 7 or 8 peas in each. A valuable pea for early market and home.

LAXTON'S PROGRESS

55 to 58 Days

A variety of great merit and popularity. The pods are large, 4 to 4½ inches long, and of fine dark green color. Vines grow only 18 to 20 inches high and bear a heavy crop of handsome pods. Being one of the earliest of the sweet wrinkled sorts, Laxton's Progress is in great demand everywhere.

LITTLE MARVEL

60 Days

The vines of this variety will grow to a height of 15 inches, producing pods 2¾ to 3 inches in length, very plump, straight, blunt ended, containing 6 to 8 tender peas of the finest flavor.

STATE

ADDITIONAL ORDER SHEETS FURNISHED ON APPLICATION.

ICER 95 (WESTERN GIANT)

73 Days

This truly is a giant podded pea of recent introduction. Its mammoth long, dark green pods, 5½ to 6 inches long, are slightly curved, and the vines about 26 inches high, producing a bountiful crop. Unlike many varieties of its season, the quality is rich in flavor and will remain tender and sweet several days after picking.

PARSLEY

PARAMOUNT

80 to 90 Days

Plants 12 inches tall, with spread of 20 inches if properly spaced. Leaves very dark green, finely cut and deeply curled.

DOUBLE MOSS CURLED

70 to 80 Days

Plant about 12 inches tall. Vigorous, compact and very productive. The color is rich dark green, with finely cut and curled leaves. One of the best varieties of curled parsley.

PLAIN OR SINGLE

75 to 80 Days

The leaves of this variety are flat, deeply cut but not curled. Very desirable for flavoring soups and stews and for drying. Plant is spreading and long stemmed.

HAMBURG OR TURNIP ROOTED

85 to 95 Days

The foliage is like parsley, but the plants have edible roots, and flavor is similar to celeriac, used for flavoring soups and stews and may be stored in sand for winter use.

PARSNIPS

ALL AMERICA CROWN

95 Days

The roots are medium long with a broad shoulder gradually tapering downward. The skin is very white in color and quite smooth. It is considered the best and most productive of the long parsnips, with fine-grained, tender and sweet flesh. Under fair conditions it yields a tremendous crop of well-shaped roots. Our seed is carefully tested for germination and you will get results from your planting.

WHITE MODEL

125 to 130 Days

Well adapted to muck soil, where roots develop a pure white color and do not branch. Roots 6½ to 8 inches long, 2 to 2½ inches in diameter at shoulder.

HOLLOW CROWN THICK SHOULDER

Root 10 to 12 inches long, 2½ by 3 inches in diameter at shoulder. Hollow crowned, uniformly tapered.

PEPPER

PRIDE OF THE MARKET

Pride of the Market pepper is of the California Wonder type, but 10 to 12 days earlier. Its earliness and productiveness warrant it first place among the heavy meated varieties. The plants are sturdy, upright and of medium size with dark green abundant foliage and broad leaves that well protect the pods. The fruits are borne upright, of medium width and averaging 3 to 3½ inches in length. The color is an intense dark green changing to a beautiful scarlet when ripe. Walls very

thick, and flesh entirely sweet, making it outstanding. Medium plants with early maturing makes it especially suited to Northern growing conditions.

OZARK GIANT

80 Days

A large and heavy yielding strain of the Giant type. Fruits similar in shape to Chinese Giant but smoother, mostly 4 lobed and of large size, $4\frac{1}{2}$ by 4 inches, medium weight.

SUNNYBROOK (Pimento)

73 Days

The deep scarlet peppers are somewhat like a flattened tomato, 3 inches across and 2 inches deep, and come in clusters of 4 to 5 sturdy, compact, 18 inch, heavily laden plants. The thick flesh is mild and sweet.

OZARK WONDER

60 Days

Ozark Wonder is a cross between Ozark Giant and Pride of the Market. Plants are vigorous and upright fruits, nearly as large as Ozark Giant, $4\frac{1}{2}$ by 4 inches in diameter, flesh medium thick, deep green, very prolific, often as much as 25 to 30 peppers per plant.

CALIFORNIA WONDER

72 to 76 Days

The leading market garden and shipping pepper, resembling Chinese Giant in shape, but has thick side walls, 4 lobed, upright, short oblong with little taper. Smooth, uniform and deep green, changing to bright crimson. Sweet and mild.

CHINESE GIANT

80 to 85 Days

An attractive large fruited variety. Plants short and stocky, light green. Fruits $4\frac{1}{2}$ to 5 inches long, square, blocky with crumpled ends, deep green.

RUBY KING

68 Days

Plant medium size, erect and productive; fruits 3 lobed, tapered, thick, sweet and mild, $4\frac{1}{2}$ to 5 inches long, $2\frac{1}{2}$ inches through. Deep green, becoming bright red.

KING OF THE NORTH

65 Days

A first early Ruby King variety developed for the Northern grower. Plant 16 to 22 inches tall, sturdy and prolific. Fruits, $4\frac{1}{2}$ inches long by $3\frac{3}{4}$ inches in diameter. Dark green, medium thick, mild flavored flesh.

WORLDBEATER NO. 13 (Blight Resistant)

70 Days

One of the most popular shipping varieties, selected from a cross of Ruby King and Chinese Giant. Fruits $4\frac{1}{2}$ to 5 inches long, $3\frac{1}{4}$ to $3\frac{3}{4}$ inches in diameter, slightly tapered with blocky ends, 4 lobed, smooth and glossy, dark green becoming bright dark red.

YELLOW SWEET BANANA

65 Days

Attractive yellow variety producing fruits 4 to $4\frac{1}{2}$ inches long. Color light waxy yellow when at best pickling stage, becoming bright scarlet when fully ripe.

YELLOW SWEET BULL NOSE

65 Days

The largest yellow pepper. Skin golden yellow, flesh thick and bright yellow. Very mild and sweet.

YELLOW HOT HUNGARIAN

60 to 65 Days

Very early, very desirable for home, market garden and canning. Plants small, compact and highly productive. Fruits 6 to 7 inches long, 2 inches thick, tapered, smooth, waxy light yellow, becoming bright red, flesh thick and pungent.

CAYENNE (LONG NARROW)

70 to 74 Days

The long and slender strain with exceptionally hot and twisted fruit. 4 to 4½ inches long by ½ to ¾ inches in diameter at shoulder. Very pungent, dark green changing to dark red when mature.

CAYENNE (LARGE THICK OR FINGER)

70 to 74 Days

Fruits have thicker flesh than Long Narrow, 4 to 5 inches long. More smooth and not quite as pungent.

SMALL RED CHILI

80 to 84 Days

A really hot pepper, small pointed fruits, thin flesh, 2 to 2½ inches long by ½ inch in diameter. Used for pepper sauces, pickling and drying for winter use.

OAKVIEW WONDER (CALIFORNIA XXX)

An earlier and more productive strain of California Wonder, developed by line breeding. Fruits blocky, smooth, with thick, mild, sweet flesh. Plants shorter and stockier than California Wonder, but fruits are set earlier and more abundantly. An outstanding strain, unsurpassed for shipping or for the home and market garden.

PUMPKIN

CONNECTICUT FIELD

112 to 120 Days

Standard cornfield variety, large pumpkin used for both stock feed and canning. The fruits are 12 to 15 inches in diameter by 10 to 14 inches deep, weighing about 20 pounds, skin smooth, dark orange. Flesh orange-yellow, coarse, thick, dry and sweet.

SMALL SUGAR

115 to 120 Days

Also called New England Pie. Small, orange skinned, slightly ribbed. Finest quality flesh for pies.

GREEN STRIPED CUSHAW

110 to 115 Days

A smooth, crookneck shaped variety, white with green mottling and stripes. Medium size, weighing 12 to 16 pounds. The flesh is pale yellow, coarse and fibrous, thick, sweet and moist.

KING OF THE MAMMOTHS

115 to 120 Days

This is the largest of the pumpkins, weighs 35 to 50 pounds, 18 to 24 inches long by 15 to 18 inches in diameter. Flesh yellow to orange color, hard and firm, coarse, moist and only fair quality.

RADISH

BRIGHT SCARLET GLOBE (Greenhouse Forcing Special)

22 Days

Imported, transplanted stock. We offer this Greenhouse Special for a forcing radish. This strain is improved in color, brilliant scarlet, crisp, thin-skinned and longer standing before becoming pithy. Short tops and olive shaped—a really quality radish.

RE-SELECTED SCARLET GLOBE

24 Days

Imported, transplanted stock. Standard type No. 1. Grown from carefully selected transplanted roots. A perfect strain, surprisingly uniform, color brightest scarlet, shape perfect. Well-rounded bottom, with thin taproot. Tops medium size and uniform flesh, pure white, crisp and fine flavor. Fine for market and shipping.

CAVALIER

22 Days

A highly colored and attractive variety for all purposes, especially for shipping. Tops small, roots oblong globe, very firm and bright scarlet color. Especially adapted for forcing and growing on muck land.

SOUTHERN MARKET SCARLET GLOBE

23 Days

A medium top, Scarlet Globe type radish for shippers. Developed for upland and sandy soils. Bright, deep scarlet color, firm white flesh and very slow to get pithy.

ICICLE

22 Days

A splendid long, white variety of almost transparent whiteness. Tops small, roots long, tapered, white throughout and brittle. 5 to 6 inches long and ½ inch thick, mild flavor.

WHITE STRASBURG

40 Days

Handsome oblong and tapering, both skin and flesh being pure white. Flesh is firm, brittle and tender, retains its crispness even if old and large. Excellent for summer use.

ICICLE-MUCK SOIL STRAIN

A very highly selected strain and excels all others. The roots are remarkably uniform and perfectly shaped. Tops are short and compact, but when grown on muck soil they reach just the ideal size for easy bunching.

EARLY SCARLET GLOBE

This is a very fine short-top strain, equally fine for forcing and for outdoor growing, especially on muck. The small tops are ideal for bunching and the globe-shaped roots are rich, bright scarlet in color. The flesh is clear white and firm.

ROUND BLACK SPANISH

Grows to a large size, very solid.

LONG BLACK SPANISH

Oblong, very large size and firm texture. Sown earlier than fall turnips and should be stored in cellar for winter use.

CHINESE ROSE WINTER

A scarlet winter variety, about 4 inches long and stump rooted. Like Chinese White Winter only red.

SCARLET GLOBE, MEDIUM TOP

The same quality and shape as Short Top, on medium tops.

SPINACH

GIANT THICK LEAVED (Nobel) (Round Seeded)

43 Days

Decidedly the best of the round seeded, thick leaved group. Because of the enormous yield, long standing character, and the deep green color and smooth character of the leaves, this is highly recommended for canning as well as for home and market garden. Leaves very large, thick, broad arrow-shaped with rounded tip.

LONG STANDING BLOOMSDALE

45 Days

(Round Seeded)—In demand for home and market gardens because of the uniform, handsome plants and remarkable long standing quality. Resembles Savoy Leaved or Bloomsdale, but is a trifle later, or more compact habit, a trifle darker green, and remains free of flower stalks about two weeks longer.

OLD DOMINION

40 Days

(Blight Resistant)—A cross between Virginia Blight-Resistant Savoy and King of Denmark. Large, dark green, heavily crumpled leaves. Long standing and resistant to mosaic. Used mostly for an early crop.

BLOOMSDALE DARK GREEN, RESELECTED

40 Days

(Round Seeded)—The standard very early sort for home and market garden. Plants upright and compact, attain height of 10-12 inches and spread of 12-15 inches. Leaves large; blistered and crumpled; rich, deep, glossy green; of splendid quality.

KING OF DENMARK

48 Days

(Round Seeded)—Extremely long standing, smooth, dark green leaved sort for home and market garden as well as for canning. Plants large and spreading, with large, thick leaves that are only slightly crumpled. Spring sown crops are very often free of flower stalks until midsummer.

HARLEM MARKET OR PRESTO

36 Days

Recommended especially for use at seasons when ordinarily you would sow Reselected Bloomsdale or Blight-Resistant Savoy. It resembles the Savoy or Bloomsdale varieties in appearance, but is hardier, earlier and quicker growing. In fact, it grows so quickly that it can be cut off the ground before other varieties. The seed is prickly.

NEW ZEALAND

70 Days

Absolutely distinct in form, color and habit from other spinach—it is not a spinach, though used as a spinach. Foliage thick, succulent, dark green, never sunburns, a true heat resistant, leaves covered with water globules like an ice-plant. Later to mature for table spinach of usual form, but remaining in edible condition ten times as long. Plants remain in edible condition from July until killed by frost. A sort to “cut and come again.”

VIRGINIA SAVOY-LEAVED BLIGHT RESISTANT

This robust variety is especially valuable for its blight-resisting quality. The large, dark green leaves of good substance are savoyed and crumpled. It is best suited for late crop and the seed should not be sown before the latter part of August, as the plants have a great tendency to bolt to seed if sown earlier.

SQUASH

IMPROVED OR LARGE TABLE QUEEN

80 Days

The demand for this large size Table Queen is growing by leaps and bounds because growers find it the most profitable kind to grow. The fruits have the true pointed acorn shape but are larger than the regular Table Queen, measuring about 6-7 inches long and 5 inches across. Attractive dark green color and good quality always demand a good market and the vines yield tremendous crops.

EARLY PROLIFIC CROOKNECK

50 Days

Very popular in the South, where squashes are picked young. Plants very prolific. Fruits curved at neck, light yellow, warted.

EARLY PROLIFIC STRAIGHTNECK

50 Days

New high yielding summer squash. Plants strictly bush and compact with ample foliage, permitting close planting. Fruits straight, smooth and of delicate creamy color. Firm and usable when only 4 to 5 inches long and until 12 to 14 inches long.

EARLY WHITE BUSH SCALLOP

50 Days

Scallop squash for home and market. Fruits uniform, round, attain 9 inches in diameter, flattened with scalloped edges, smooth, green white when young, white when mature.

ZUCCHINI GREY

60 Days

A well-known Italian Marrow type. Fruits very nearly cylindrical, straight. Color medium green, mottled with creamy gray and lighter green lace pattern and stripes. Flesh very firm and delicate flavor.

ZUCCHINI BLACK

60 Days

Popular in the West and South. Fruits are cylindrical, long, smooth, dark green-black; flesh greenish white at eating stage and of good flavor.

BUTTERCUP

100 Days

Turban shaped, 3½ pounds. Rind thin and tough, dark green with narrow gray stripes and slight mottling. Orange flesh cooks sweet and dry. A small thick-fleshed squash of good storage and eating quality.

DENNINGS BLACK STRAIN WARTED HUBBARD

Has been bred to meet the requirements of a high-class trade. Fruits are of large size, rough skin, dark green in color. Vines are of strong, robust growth, flesh is bright orange, fine grained, rich and dry. 12 to 15 pounds.

BLUE HUBBARD SPECIAL (XXX Blue Hubbard)

A new variety obtained by selection from the original Hubbard. The fruit is gray-green color, grows much larger than Hubbard and keeps remarkably well, as the shell is extremely hard. The shape and appearance of this squash is ideal. 18 to 21 pounds.

BUTTERNUT

95 to 102 Days

Maturing an abundant crop in late summer and early fall, this squash has become a leader. Fruit 12 inches long, pear shaped, hard, tough rind. Skin smooth, light cream buff. Flesh is dry, light yellow with sweet nutty flavor. Fairly good keeper.

TOMATOES

RUTGERS CERTIFIED (formerly BoKay)

82 Days

We are sincere in our belief that this is an outstanding main crop variety. It is wilt resistant, and trials show it to be almost free from wilt and cracks. Fruit bright scarlet, medium large, deep oblate, smooth skinned. Its strong, heavy foliage makes it a valuable variety for planting on light soils.

BREAK O'DAY (Super strain or Improved)

68 Days

This new Break O'Day must not be confused with the older type. Fruit deep scarlet, medium to large, globe shaped, smooth and free from cracking. Heavy green foliage gives good protection against sun scald.

VALIANT CERTIFIED

68 Days

This variety is becoming very popular with market gardeners. A half-brother of Stokesdale, it develops a deep Marglobe type tomato and ripens within 3 days of Earliana. It is 4 days earlier and often 2 ounces heavier than Stokesdale. A valuable tomato for market but not primarily adapted as a canner. Our sales have steadily increased on this variety.

STOKESDALE CERTIFIED

73 Days

Fruit medium size, smooth and free from cracking, bright scarlet color throughout, solid flesh, good quality and flavor. Ripens from the inside out. Vine, medium size, with a moderate amount of semi-erect branches covered with heavy, medium green foliage that gives good protection to fruit. A second early variety.

GULF STATE MARKET (SUPER PURPLE KING)

85 Days

A second early, smooth, pink-fruited variety. It is very similar to Globe. Fruits are globe-shaped, high crowned, medium size and smooth, very solid and meaty. They set in clusters of from 5 to 7. Unsurpassed by any other pink variety. Should be staked. Vines long, somewhat resistant to wilt.

SIOUX

68 Days

A new tomato developed from All Red x Stokesdale at the Nebraska Experiment Station. Plant relatively open, with finely-divided leaves; fruits of medium size, almost globular, thick-walled and practically free from hard core, juicy, with good acid flavor. This variety possesses the uniform ripening factor.

KING OF THE STAKERS

64 to 70 Days

A many-purpose variety, extra early and smooth, large. Fruits are large, smooth, globe-shaped, bright scarlet and free from cracks. Highly resistant to fusarium wilt. Very productive. As early as Earliana. Has normal vine coverage. Also very satisfactory as a greenhouse tomato.

See price list for all other varieties. We also carry the Hybrid tomato seeds of Burpee's and Stokesdale Hybrids, Stokesdale Proving Ground Stock, and all other certified varieties.

TURNIPS

EXTRA-EARLY PURPLE TOP MILAN

45 Days

This splendid turnip is the earliest of the purple top type. The bulbs are flat, medium size, smooth and free from rootlets with thin and crisp white flesh of excellent flavor. The upper portion of the bulb is a rich purple, while the lower half is pure white.

PURPLE TOP WHITE GLOBE

55 Days

The bulb measures 3 inches and more in diameter, being a perfect globe form. Flesh white, firm and crisp of mild flavor. An excellent keeper, and very productive. This variety is extensively used for market growing.

EARLY SNOWBALL

40 Days

Small top. Root medium size, round, white throughout, crisp and mild.

TOKIO MARKET, IMPORTED

36 Days

All-white turnip, semi-globe shaped, short top, sweet and flavorful. Imported for early planting, when earliness is the main object.

SEVEN TOP

Grown in the South for winter greens, the young leafy shoots are tender and produce heavily. The roots are woody, coarse and not edible.

PURPLE TOP WHITE GLOBE, SMITH STRAIN

(XXX Purple Top White Globe)

57 Days

Owing to the great amount of care and labor involved in making this the best strain on the market, we are obliged to ask a higher price than for ordinary stock. However, the better price you will obtain for these extra fine turnips will more than offset the small increase in cost. Its particular feature is its bright red top which goes well down on the root. It is a quick growing type, with fine flavored flesh. Keeps well.

RUTABAGA

AMERICAN PURPLE TOP

90 Days

This type of rutabaga has been grown for a hundred years. Our strain has been developed for a smaller top and shorter neck. Roots 5 to 6 inches in diameter, globe to top shaped, buff color with purple top. Flesh firm texture, light buff and good flavor.

GOLDEN NECKLESS

80 to 84 Days

American Purple Top variety, but smaller. Root flattened globe in shape, skin buff with purple shoulder. Flesh deep yellow, firm and fine grained.

LAURENTIAN

90 Days

Tops short, practically neckless. Roots large, spherical, purplish red above ground, light yellow below. Flesh creamy yellow, firm, fine grained, mild and sweet. Excellent shipper and keeps well in storage.

WATERMELONS

BLACKLEE CERTIFIED

95 Days

Is oblong in shape, rind dark green, flesh rich red, seeds black, a very solid melon, free from hollow centers, heavier than any, in proportion to size, than any melon of our acquaintance. Has a tough rind, making it one of the best shippers. 30 to 35 pounds.

DARLINGTON

86 Days

Is a long type melon, gray green with irregular dark stripes, rind very thin, flesh very tender, luscious, with a distinct and pronounced flavor and aroma. Darlington is the best for home and local markets, rind too thin for shipping. 40 to 60 pounds.

FLORIDA GIANT, BLACK DIAMOND, OR CANNON BALL

CERTIFIED (Oklahoma Chief)

95 Days

A large round melon with black green, shiny, glossy rind. Has no stripe, just solid, smooth, black green. Its flesh is blood red, tender and very sweet. The rind is very thin and tough and can be hauled without damage any distance that any melon can be hauled. They are hardy and resist drought better than any except Kansas King. Ripen in midseason. 38 to 42 pounds.

EARLY KANSAS SPECIAL STRAIN (Kansas King)

80 Days

A well-known melon of high merit, early, of large size and excellent quality. Fruits nearly round, slightly longer than broad; deep emerald green color with irregular green stripes. Popular in Midwest for shipping. Rind medium thick and strong. 35 to 50 pounds.

NOTE: As you go over this list you will find that we are complying with the Federal Seed Laws and listing the real growing name of 27 varieties, and following is the name A & B has been selling it under. At no time was there any intent of fraud or fancy price, but our selection of that particular variety that to us seemed to give the grower the greatest satisfaction.

HOW TO ORDER AND REMIT TRANSPORTATION

Prices quoted in this catalogue are shipped anywhere in the United States proper by Parcel Post, Express or Freight, our option, all transportation and packing charges paid by us, unless otherwise stated. We do not pay transportation charges on insecticides, fertilizers, implements, rubber bands and twine. All transportation charges will be allowed on settlement of your account with the above exceptions.

TERMS OF SALE

Regular terms are cash with order. We are pleased to open accounts to market gardeners of established credit or who can furnish satisfactory credit references. At least three established credit or bank references are necessary.

5% discount allowed on orders of \$20.00 or over on seed only, if paid within 10 days from date of invoice.

ORDERING

An order blank and stamped envelope are enclosed for your convenience. Write your name, post office, shipping point or nearest express office, your county and state. Write amounts and varieties clearly.

HOW TO MAKE REMITTANCES

Remittances may be made by any of the following: Post Office money order, Bank Draft or check, cash in registered letter or Express money order.

SHIPPING INSTRUCTIONS

When goods are to be shipped by freight or express give clear shipping directions.

The Andrews-Burri Seed Company gives no warranty, express or implied, as to the productiveness of any seeds we sell, and we will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed only.

RUBBER BANDS

New Rubber Bands cheaper and far more handy than twine for asparagus, onions, radishes and other bunching varieties. 7,000 to pound, the larger sizes a trifle less count per pound. We can supply the following sizes: Nos. 8, 9, 10, 11, 12, 14 and 16. Write for prices.
